

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Previously Presented) A facsimile comprising:

a scanner for capturing an image;

a memory card reader for reading image data from a memory card;

a modem for modulating and demodulating image information into and from the data that can be transmitted and received through a communication line;

an operating unit operable to be coupled to the memory card reader, the modem, and the scanner, the operating unit being operable to select an image from one of the memory card, the communication line, and the scanner; and

a printing unit for printing the selected image, according to an instruction from said operating unit.

2. (Previously Presented) The facsimile according to claim 20, wherein the information corresponding to the image data read out from said memory card comprises at least one thumbnail corresponding to the image data read out from said memory card.

3. (Previously Presented) The facsimile according to claim 2, further comprising:

a display for displaying said at least one thumbnail corresponding to the image data read out from said memory card; and

a controller operable to:

select a specific thumbnail from said at least one thumbnail displayed on said display with said operating unit; and

make said printing unit print an image corresponding to the specific thumbnail.

4. (Previously Presented) The facsimile according to claim 3, wherein said controller is operable to select one from: allowing the printing unit to print the image corresponding to the specific thumbnail after said printing unit prints said at least one thumbnail; and allowing the printing unit to print the image corresponding to the specific thumbnail without printing said at least one thumbnail by the printing unit after said display displays said at least one thumbnail.

5. (Previously Presented) The facsimile according to claim 3, wherein said operating unit comprises numeric keys for selecting the specific thumbnail from said at least one thumbnail.

6. (Previously Presented) The facsimile according to claim 3,

wherein said display displays a detailed image corresponding to the specific thumbnail if said controller selects the specific thumbnail, and

wherein said printing unit prints the detailed image according to an instruction from said operating unit.

7.-10. (Cancelled).

11. (Previously Presented) A communication terminal comprising:

a memory card reader for loading and unloading a memory card and reading image data from said memory card,

a receiver for receiving image information through a communication line,

an operating unit operable to be coupled to the memory card reader and the receiver, the operating unit being operable to select an image from one of said memory card and said communication line, and

a printing unit for printing the selected image.

12. (Previously Presented) The communication terminal according to claim 24, wherein the information corresponding to the image data read out from said memory card comprises at least one thumbnail corresponding to the image data read out from said memory card.

13. (Previously Presented) The communication terminal according to claim 12, further comprising:

a display for displaying said at least one thumbnail, and

a controller operable to

select a specific thumbnail from said at least one thumbnail displayed on said display with said operating unit; and

make said printing unit print an image corresponding to the specific thumbnail.

14. (Previously Presented) The communication terminal according to claim 13, wherein said operation unit is operable to allow the printing unit to print the image corresponding to the specific thumbnail after said printing unit prints said at least one thumbnail.

15. (Previously Presented) The communication terminal according to claim 13, further comprising numeric keys for selecting the specific thumbnail.

16. (Cancelled).

17. (Previously Presented) The communication terminal according to claim 11, further comprising an image data format converter for converting the image data stored in said memory card into data conforming to the ITU-T T.81 Standard.

18. (Original) The communication terminal according to claim 11, wherein said memory card is a secure digital (SD) memory card.

19. (Currently Amended) The communication terminal according to claim 11, further comprising an image data format converter for converting a JPEG image data in a JFIF format of TIFF into data conforming to the ITU-T T.81 Standard.

20. (Previously Presented) The facsimile according to claim 1, wherein said printing unit prints, according to an instruction from said operating unit, information corresponding to the image data read out from said memory card.

21. (Previously Presented) The facsimile according to claim 20, further comprising a display for displaying the information corresponding to the image data read out from said memory card.

22. (Previously Presented) The facsimile according to claim 3, wherein said controller is operable to automatically control said display for allowing said display to display said at least one thumbnail if said operation unit selects the image from the memory card.

23. (Previously Presented) The facsimile according to claim 1, wherein the memory card is detachable from said facsimile.

24. (Previously Presented) The communication terminal according to claim 11, wherein said printing unit prints information corresponding to the image data read out from said memory card.

25. (Previously Presented) The communication terminal according to claim 24, further comprising a display operable to display the information corresponding to the image data read out from said memory card.

26. (Previously Presented) The communication terminal according to claim 13, wherein said controller is operable to automatically control said display for allowing said display to display said at least one thumbnail if said operation unit selects the image from the memory card.

27. (Previously Presented) The communication terminal according to claim 12, further comprising a display for displaying said at least one thumbnail.

Appln. No.: 09/855,270  
Amendment Dated: October 11, 2005  
Reply to Office Action of: August 11, 2005

MAT-8128US

28. (Previously Presented) The communication terminal according to claim 11, wherein said printing unit prints a detailed image of the image data.

29. (Previously Presented) The communication terminal according to claim 11, further comprising an image data format converter for converting the image data stored in said memory card into data in a format for a transmission via a telephone line.

30.-38. (Cancelled).
